PROFESSIONAL SUMMARY

Full-stack developer who turns complex problems into clean, scalable solutions. Strong in **Java**, **Spring Boot**, **React.js**, and the **PERN** stack, with hands-on experience shipping microservices, REST APIs, and cloud-deployed apps. I thrive in agile teams and love building things that actually work.

Currently building custom software solutions for multiple clients at Botivate Services LLP, working across **React.js**, **Next.js**, **Node.js**, and **PostgreSQL**. I focus on optimizing performance, strengthening cloud infrastructure with **Docker** and **AWS**, and delivering products that scale.

WORK EXPERIENCE

Backend Developer (Full-time) — Botivate Services LLP

Jun 2026 – Present | On-site, Raipur

- Spearheaded the backend architecture and workflow optimization for a next-gen enterprise application featuring 20+ integrated modules, backed with advanced AI agents, and automated workflow systems currently preparing for launch.
- Led end-to-end project execution and systems upgradation for multiple client systems, delivering custom software solutions while improving multi-tenant architectural efficiency by ~35%.
- Driven technical quality initiatives across assigned infrastructures, overseeing comprehensive page refactoring, deep backend API logic enhancement, and rigorous testing that reduced critical production bugs by ~40%.

Tech: React, Node.js, Express, Tailwind CSS, Supabase, PostgreSQL, Docker, AWS

Backend Developer (Internship) — Botivate Services LLP

Feb 2026 – Jun 2026 | On-site, Raipur

- Engineered a unified ERP-style platform on the PERN stack, consolidating 5+ fragmented business modules into one high-performance application used by 800+ users.
- Architected a Permission-Based Access Control (PBAC) system using Supabase RLS and custom middleware; optimized PostgreSQL schemas, triggers, and views to sustain data consistency under 500+ concurrent requests.
- Automated approval workflows by integrating the Meta WhatsApp Business API and Resend, cutting manual approval turnaround time by ~50%; shipped a CI/CD pipeline via Vercel.

Tech: React, Node.js, Express, Supabase, PostgreSQL, Tailwind CSS, Redux, React Router

PROJECTS

Nexus AI — Autonomous Agent Platform — Personal Project

Apr 2026 – Present | GitHub | Vercel

- Built a full-stack AI agent platform using LangChain4j and Gemini 2.5 Flash, implementing a self-correcting ReAct reasoning loop with reflection-based dynamic tool invocation.
- Architected a high-throughput asynchronous backend with JDK 21 Virtual Threads (Project Loom); built a complete RAG pipeline using Apache Tika, text-embedding-004, and Supabase pgvector, handling 100+ requests/sec.
- Designed a state-machine-based task execution engine with live log streaming and a responsive, glassmorphic Control Room UI using React 19, Zustand, and Framer Motion.

Tech: Java 21, Spring Boot 3.5, React 19, JavaScript, PostgreSQL, Supabase, Spring Data JPA, Tailwind CSS

SKILLS

Programming Languages: Java, JavaScript, SQL

Frameworks & Libraries: Spring Boot, Express, Hibernate, JWT Auth, OAuth Integration, Node.js, React.js, Redux, Next.js, Material UI, Bootstrap, Framer Motion

Databases: PostgreSQL, MongoDB, MySQL

Tools & Platforms: Maven, npm, Docker, Git, GitHub, Postman, Vercel, Render, Supabase, Framer

Languages: Hindi, English

Soft Skills: Problem Solving, Adaptability, Teamwork, Critical Thinking

EDUCATION

Centre for Development of Advanced Computing — Hyderabad

Post Graduate Diploma in Advanced Computing | Feb 2025 – Aug 2025

Bhilai Institute of Technology — Durg

Bachelor of Technology in Computer Science | Dec 2020 – May 2024
